

KneuraSense Wi-Fi Setup Guide

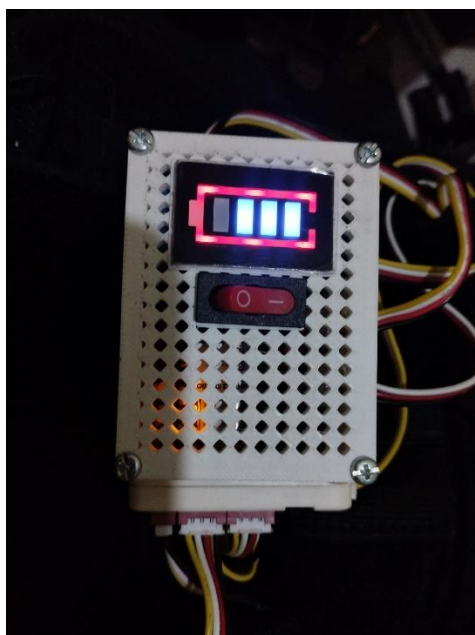

Your device needs to connect to your home internet to fetch weather updates and securely save your daily health data.

Follow these steps to get connected:

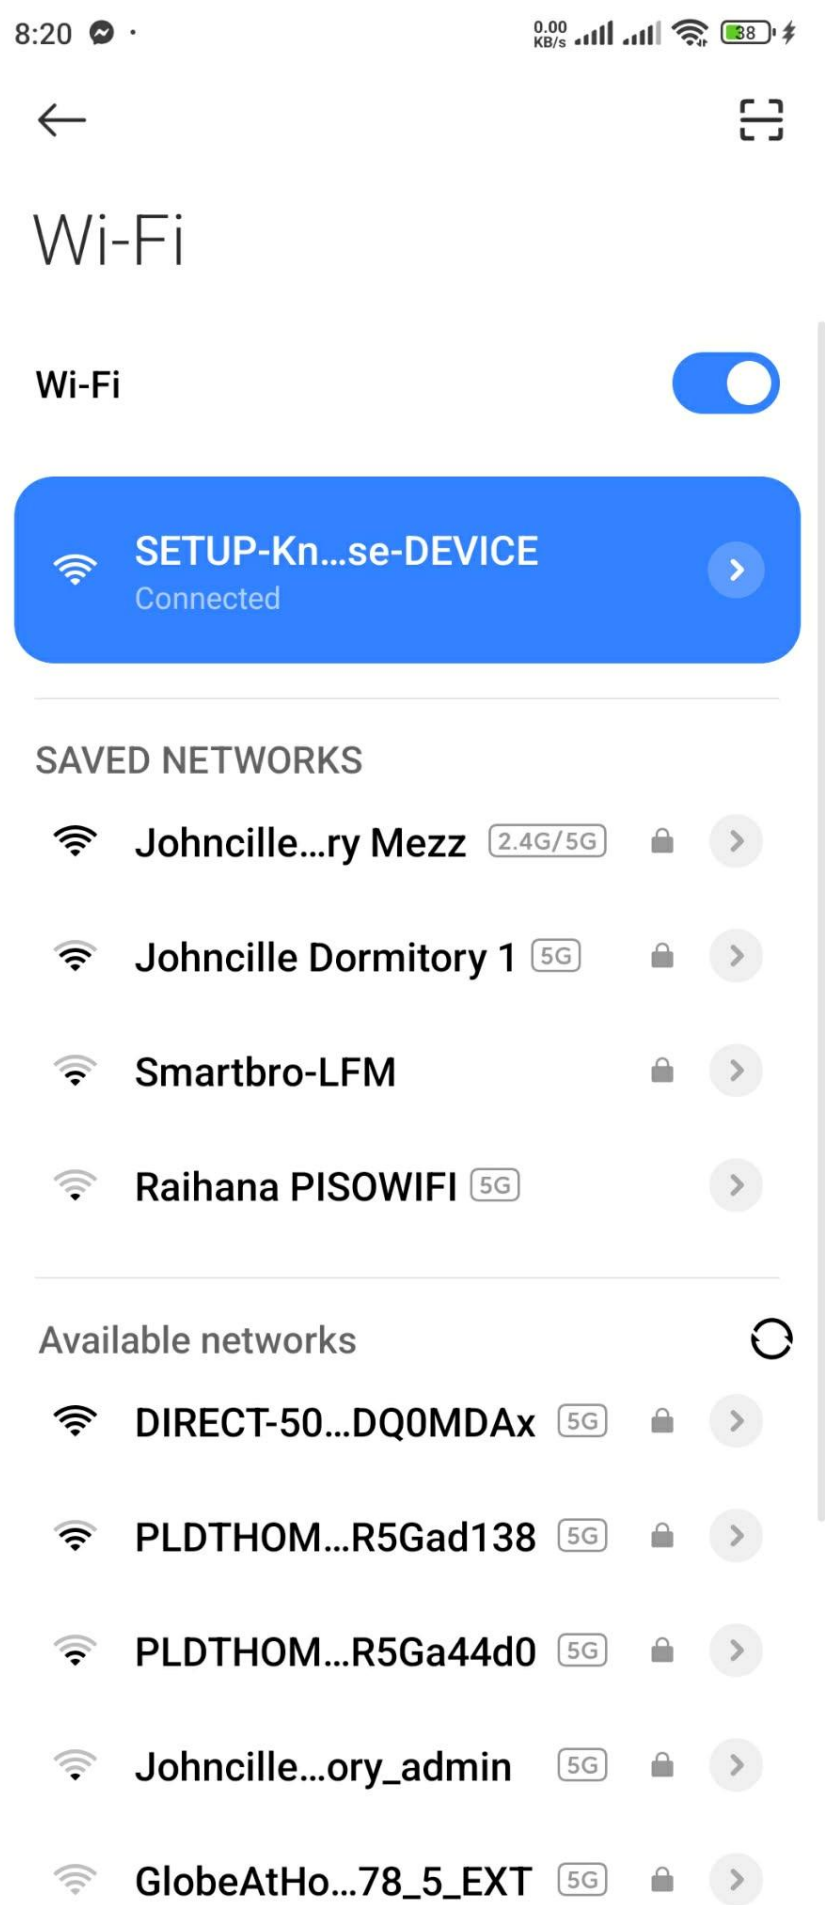

1. **Power On** Turn on the main power switch. The indicator light will turn **Solid Red** while the device runs a quick self-check.

2. **Enter Setup Mode** If the device doesn't recognize a saved Wi-Fi network, an internal light will turn **Solid Yellow** (visible through the mesh casing) and the device will vibrate. This indicates it is in setup mode and broadcasting its own setup network.

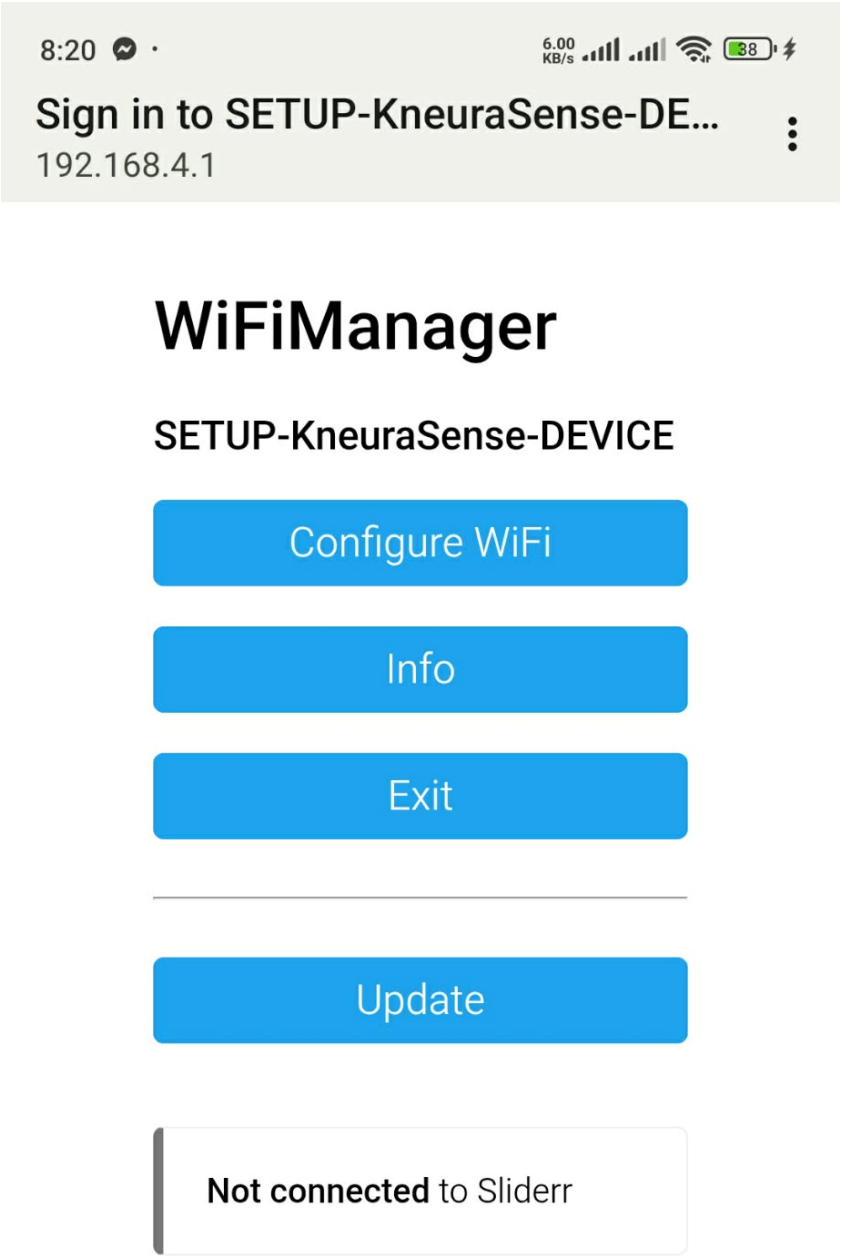

3. **Connect to the Device** Open the Wi-Fi settings on your smartphone. Look for the available networks and tap to connect to **SETUP-KneuraSense-DEVICE**.

4. **Open the Setup Portal** Shortly after connecting, a system notification saying "**Sign in to Wi-Fi network**" will automatically pop up on your phone screen. Tap this notification to proceed.

5. **Configure Wi-Fi** The WiFiManager portal will load on your screen. Tap the **"Configure WiFi"** button to prompt the device to scan for your local home internet networks.

6. **Enter Your Password** Select your home Wi-Fi network (SSID) from the generated list. Tap the password box, enter your home Wi-Fi password, and tap **"Save"**.
